Reasons For Allowance

1. The following is an examiner's statement of reasons for allowance:
2. **Claims 1-18** are allowed.

The present invention is directed to a method and system for selecting a preferred data provider from a plurality of data providers by performing the following steps: receiving a request from the client for data along with the client identification, identifying the plurality of data providers, instructing the data provider to perform tests so that a measure of the elapsed time can be determined, determining a measure of the remaining capacity for data transfer. Selecting the preferred data providers based on elapsed time signals and the remaining capacity signals. Each independent claim identifies the uniquely distinct claimed features.

Regarding independent claim 1, system for selecting a preferred data provider from a plurality of data providers, the system comprising: means for receiving a request for data from a client; means for receiving client identification data from said client; means for identifying a plurality of data providers having, or having access to, data in respect of which request has been received from said client; means for providing said client identification data to said data providers; means for instructing said data providers to perform the steps of: (i) sending a test signal to said client; (ii) receiving a return signal from said client; (iii) obtaining a measure of the elapsed time between the sending of the test signal and the receipt of the return signal; (iv) making a signal indicative of the elapsed time available to the system; and v) making a signal indicative of their remaining capacity available to the system; means for receiving

Art Unit: 2416

elapsed time signals and remaining capacity signals from said data providers; means for selecting a preferred data provider from said plurality of data providers on the basis of said signals; and means for providing information relating to the identity of said preferred data provider to said client.

Regarding independent claim 10, method for selecting a preferred data provider from a plurality of data providers, the method comprising the steps of: receiving a request for data from a client; receiving client identification data from said client; identifying a plurality of data providers having, or having access to, data in respect of which request has been received from said client; providing said client identification data to said data providers; instructing said data providers to perform the steps of: (i) sending a test signal to said client; (ii) receiving a return signal from said client; (iii) obtaining a measure of the elapsed time between the sending of the test signal and the receipt of the return signal; (iv) making a signal indicative of the elapsed time available to the system, and (v) making a signal indicative of their remaining capacity available to the system; receiving elapsed time signals and remaining capacity signals from said data providers; selecting a preferred data provider from said plurality of data providers on the basis of said signals; and providing information relating to the identity of said preferred data provider to said client.

The closest prior art of record, Kenner '007 discloses a conventional method and system for selecting a preferred content provider from a plurality of data providers (fig. 1, see content providers 22, 24, paragraphs 0045-0046) by performing a series of ping tests, paragraphs 0073-0076. Kenner '007 further discloses determining the

Art Unit: 2416

transmission capacity and the average loading using tests (paragraphs 0084-008, 0088, 0097), measuring the round trip time (i.e. how long each hop takes), paragraphs 0075-0078.

DeFerranti '841 discloses a communication system (fig. 1, communication system with a plurality of service providers and clients, paragraphs 0141) for receiving a request from a user and selecting one of the service providers (paragraphs 0007, 0010-0011, 0036). DeFerranti '841 further discloses identifying a preferred service provider based on traffic classes (paragraphs 0018, 0020), the user selecting a service provider on the basis of connection quality index such as number of hops, packet loss, round-trip-time to from a given destination, paragraphs 0023, 0024 and the transfer rate, paragraph 0277, 0281).

The closest prior are silent with respect to the uniquely distinct claimed features “means for receiving elapsed time signals and remaining capacity signals from said data providers; means for selecting a preferred data provider from said plurality of data providers on the basis of said signals; and means for providing information relating to the identity of said preferred data provider to said client”.

The closest prior arts either singularly or in combination fail to anticipate or render the uniquely distinct claimed features obvious.

Dependent claims 2-9, 11-18 are allowed by virtue of their dependency on claim 1, 10 respectively.

Art Unit: 2416

3. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
